Feature branch
- https://github.com/NinaRubanovich/Group8/tree/feature

Code links
- Background texture/image
  - Static/img
    - Add image for new background
  - static/css/stylesheet.css
    - Html, body {}
      - Set added image as background
      - background-image: url(static/img/"name");
- Resize content to be more narrow and show side bars/new background
  - static/css/stylesheet.css
    - .content {}
      - `background-color: #252525;`
      - `Max-width: 75%`
      - `Margin: auto:`
- Scrolling animation
  - `scroll-behavior: auto|smooth|initial|inherit;`
  - `html {`
  - `  scroll-behavior: smooth;`
  - `}`

Updated requirements
The requirements in Sprint 3 are the same as in Sprint 2.

Testing Plan
Run the webpage on different browsers and operating systems in order to ensure that our changes are viewed on all/most systems. Because our project deals with visual, rather than functional, changes, we would not necessarily need unit testing, hence no stubs.

Reflection
The biggest challenge we faced for this Sprint came from the css styles that were imported from w3. This made it hard to directly see the details for what we could change without messing stuff up. With the time we had, we did our best to make as many changes as we could get to work.

We decided to change some, not all, of the fonts in order to create a more interesting visual variety. We also added an interesting background and changed some dimensions of the layout. We also made the scroll animation smooth.
